

# Project Management

NSPI Project Managers assist our clients with large scale implementations, deployments and standard IT service delivery projects. Whether onsite or offsite, our Project Managers can help you maintain your project's timeline and budget.

*Our Project Management team members follow proven best practices policies so they can help you develop, manage, implement and monitor any business project with optimal results.*

## You can trust NSPI to help you get your project done right

**N**SPI approaches all of its service delivery engagements from a project management point of view. Our proven project management methodology, known as PM2, is based on best practices from the Project Management Institute, ITIL, Six Sigma and those developed internally. It's a process that substantially reduces the risks of any project, thereby greatly increasing its likelihood of success. Every NSPI project or engagement includes the appropriate level of project management involvement and oversight. NSPI will not undertake a project without it.

### Your NSPI Project Manager

When you engage with us on a project, your dedicated NSPI Project Manager will become your primary point of contact. The Project Manager will work closely with you to create key project documents to help manage and track your project:

- ▶ Project charter and scope
- ▶ Detailed project plan—activities, tasks, assignments, time frames

- ▶ Communication plan
- ▶ Risk management plan
- ▶ Change management plan
- ▶ Deliverable acceptance process and form

### Project Oversight and Management

Perhaps the most important thing our Project Managers will do for you is to provide the oversight and management of all the people, processes and technology of your project so that they all come together at the right times and the right places.

Whether you're looking at a three-week project or a multiple-month deployment involving hundreds or thousands of systems, our Project Managers will identify, coordinate and manage the key activities, milestones and people responsible so that the project flows as it should. And if issues do come up, you can rest assured knowing that your NSPI Project Manager will be there to bring about a satisfactory resolution.
