

Systems Refresh and Installation

From day-to-day single PC refreshes to large-scale deployments of thousands of PCs, NSPI provides seamless IT lifecycle refresh services through our combined capabilities of procurement, warehousing, integration and national deployment.

Complete system installations from start to finish

NSPI has a large national deployment team with over 700 certified engineers, technicians and project managers. Our agents are experts in their field with over 4,400 certifications between them.

Our teams have handled everything from small, single location desktop installations to large, national multi-technology deployments involving hundreds of different locations. We can deploy a wide variety of technologies, including servers, desktops, printers, networking equipment, patch panels, phone systems and displays.

NSPI can help you plan, deploy, manage and refresh all of your IT equipment no matter what mix of computers, servers and devices you require.

Project Lifecycle Services

A major deployment project involves far more than just having qualified people install the equipment at the end user's location. It requires the precision performance and coordination of many activities before the equipment ever gets there.

A deployment plan has to be developed, hardware and software has to be ordered and received, and systems must be configured, integrated, imaged, tested and asset tagged. And they have to be stored until the end user site is ready for them. The systems then must be shipped and received where the deployment team will be dispatched to unpack, install and test them. Finally, existing equipment must be packed up and shipped off to be redeployed, disposed of, or recycled.

The greatest value we bring to our customers is our capability to supply all the necessary services associated with a deployment and to tie it all together through our project management.

Project Management

Our Project Managers provide the oversight and management of all the people, processes and technology of a project so that they all come together at the right time and the right place. Whether you're looking at a three-week project or a multiple-month deployment involving hundreds or thousands of systems,

our Project Managers will identify, coordinate and manage the key activities, milestones and people so that the project flows as it should. And if issues do come up, you can rest assured knowing that your NSPI Project Manager will be there to bring about a satisfactory resolution.

We can work with you to manage the entire project from start to finish or provide only those services where you need assistance. Either way, you will benefit from partnering with NSPI, a company that truly understands the complexities involved in IT deployment.
